

Miguel André Casós Torre

Full-stack Developer specializing in local AI, automation, and data

Lima, Perú | miguel.casos@hotmail.com | github.com/mcasos | mcasos.github.io/cv-portafolio

PROFILE

Software Engineering student building verifiable products across full-stack applications, local-model evaluation, automation, and analytics. I prioritize privacy, reproducible testing, and explicit product boundaries.

TECHNICAL CAPABILITIES

Development & AI: Next.js, React, TypeScript, FastAPI, Python 3.12, REST APIs, LM Studio, RAG

Data & automation: Power BI, DAX, Power Query, Excel, SQL, Prisma, SQLite, n8n, local OCR

Quality: pytest, Vitest, Playwright, Ruff, mypy, ESLint, CI, documentation, reproducible evidence

SELECTED PROJECTS

LocalForge AI Lab | Next.js · TypeScript · FastAPI · Python · LM Studio · RAG

- Built a local-first lab that compares models, normalizes metrics and failures, recommends by task with auditable criteria, and queries documents through citation-backed RAG.
- Prepared local candidate v1.0.0-rc.1 with 131 pytest, 15 Vitest, 26 script tests, and 6 E2E checks; a 30.07-minute soak completed 20/20 attempts with no failures or stuck runs.

RutaFactura | Next.js · TypeScript · Prisma · SQLite · OCR

- Built an auditable MVP to prepare, review, and simulate transport invoices using local OCR, human confirmation, digital records, and collections workflows.
- Validated money calculations and workflows with 454 tests, 89 test files, and 16 migrations; SUNAT remains explicitly simulated.

ReporteEnergy | Power BI · DAX · Power Query · Excel

- Designed a seven-page executive dashboard integrating energy demand, operations, quality, and events into a decision-oriented narrative.
- Delivered a Power BI model, DAX measures, three sanitized public views, and a downloadable complementary Excel workbook.

EDUCATION

Software Engineering — Universidad Peruana de Ciencias Aplicadas (UPC) | 2022 — Present

CERTIFICATIONS

IBM Generative AI Fundamentals (5 courses) · University of Michigan Python Data Capstone · Google: network security, Linux and SQL, cybersecurity automation with Python
